

# ASK ABOUT DROUGHT TOLERANT MAIZE TODAY AND INCREASE YOUR YIELDS!

## Harvest time...

Potential yield from DT maize under mid-season drought...

Potential yield from non-DT maize under mid-season drought...

The Drought Tolerant Maize for Africa Seed Scaling (DTMASS) project works in six countries in eastern and southern Africa to produce and deploy affordable drought tolerant, stress resilient, and high yielding maize varieties for smallholder farmers.

Led by the International Maize and Wheat Improvement Center (CIMMYT), and funded by the United States Agency for International Development (USAID), DTMASS is implemented through strategic partnerships with national agricultural research systems, as well as public and private seed producers.
